Direct Submission

Submitted (02-AGG-2001) Sanger Centre, Binxton, Cambridgeshire, CB10 15A, UK. Email enquiries: humquery@sanger.ac.ik Clone requests: clonerequest@sanger.ac.ik

on Sep 27, 2000 this sequence version replaced quicCt6528.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Fin: EMBL; Swi. SWISSROT; Ti.: TREMHL; Wp., WOMEREP; Information on the WORNPEP database can be found at http://www.sanger.ac.uk/Projects/Clelegans/wolimper Information as sequence is not the entire insert of clone RPI-247C2 It may be also the entire insert of clone RPI-247C2 It may be associate because we sequence overlapping sections only once, except
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          regions was finished as follows unless otherwise roted; all regions were either double-strandar or sequenced with an alternate regions were either double-strandar for sequenced with an alternate them stry or covered by high quality data (i.e., phicd quality > 40); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI4 subclone; and the assembly was confirmed by restriction didees. Ref. 247C2 is trom the library RPCI-1 constructed by the group of Pieter de John. For
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The true left end of clone RP1-247C2 is at 1 in this sequence. The true left end of clone RP5-879JB is at 98251 in this sequence. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (11-JUN-2002) Wellcome Trust Sanger institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: hunguerydsanger.ac.uk Clone requests: clonerequest/sanger.ac.uk on Jun 13, 2002 this sequence version replaced gi:2/251816. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           regions were either double-stranded or sequenced with an alternate

* NOTE: This is a "working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This is a 'working draft' sequence, It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence :ceard is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Quality coverage: 3.6 in 020 bases; agarose-1p

**NOTE: This is a 'working draft' sequence. It currently consists of 12 configs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                              Mapping information for this close was provided by a lebt b. Appring the Person Department of Genetics, Washington University, St. Loris MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., paned quality >- 0); an attempt was made to resolve all sequenting problems, such as compressions and repeats; all regions were rowered by sequence from more than one subclone; and the assembly was continued by
                                                                                                                                                                                                                                                                                                                                                                                                                                 The clone sequenced to the left is RPII-556F21. 2003 bp overlap; the clone sequenced to the right is RPII-489F15. Actual start of this clone is at base position 1 of RPII-456D8; actual end is at base position 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Data from 97986 to 98116 is covered only by a single plasmid subclone. Data from H_AC012462 was used to finish this clone, AC012668,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (06-MAR-2001) Sanger Sentre, Hinxton, Cambidgeshire, CB10 15A, UK. E-mail enquiries: humquery%sanger.ac.uk Gione requests: clonerequest&sanger.ac.uk clonerequest&sanger.ac.uk clone of the sequence version replaced qi:7329727.

On Jun 26, 2000 this sequence version replaced qi:7329727.

Mirror differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we sutmit sequences with only a small overlap as described above.

It currently consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contins are represented as runs of N, but the exact sizes of the gaps are acknown. This record will be updated with the finished sequence as soon as it is available and the accession comber will.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequencing vector; plasmid: 0% of reads Chemistry: Dye-primer ET; 100% of reads Chemistry: Dye-primer ET; 100% of reads Assembly program: Phrap; version 6.990319 Consensus quality: 180026 bases at least Q40 Consensus quality: 180505 bases at least Q40 Consensus quality: 180505 bases at least Q40 Consensus quality: 180507 bases at least Q20 consensus quality: 180507 squicker pp Insert size: 193909; agarose fp Insert size: 193909; agarose fp Unality coverage: 4.17 in Q20 bases; sum-of-contist Q20 bases; sum-of-contists
